Course Details

Units of Credit 6

Summary of the Course

This course introduces the field of biomedical engineering where the principles of engineering are used to solve problems in medicine and biology. Topics covered include a basic introduction to biological systems, the engineering approach to biological systems and the application of basic engineering concepts to solving biomedical problems with examples from cutting edge technologies including the artificial heart, bionic eye, magnetic resonance imaging and tissue engineering.

Course Aims

Course Aims
1. Introduce the student to some basic concepts in several branches of engineering with applications in medicine.
2. Introduce the student to selected applications of engineering and technology in medicine.
3. Introduce the student to selected areas of physiology, which can be viewed as engineering solutions to problems of life.
4. Develop the student's ability to analyse and solve problems in the biomedical engineering area.
5. Improve the student's writing skills.
6. Enhance the student's skill at using information resources.

Course Learning Outcomes

1. Students will be able to identify and describe several applications of engineering and technology to medicine/biology.
2. Students will be able to apply basic mathematics, physics and engineering methods to solve biomedical problems.
3. Students will be able to find information on and evaluate specific applications of technology to medicine/biology.
4. Students will be able to write a concise and professional report detailing a specific application of technology in medicine/biology using the languages of engineering and medicine/biology, and present this information orally.

Teaching Strategies

Please refer to the information in Moodle

Additional Course Information

Lectures are included short online lessons and face-to-face sessions over the first hour of each tutorial. They include concept development, problem-solving and discussion sessions. These will cover the theory supporting experimental methods and the practical research problems. Tutorials are designed to explain the concepts introduced in the lectures using practical approaches. These strategies are intended to support you in attaining the learning outcomes. Content, including notes and videos, will be available via Moodle and in the class. Assessments and feedback will be provided to you regularly.

Assessment

Further information related to the assessment will be provided in the Moodle and face-to-face classes.

Assessment task	Weight	Due Date	Course Learning Outcomes Assessed
1. Major Report	50%	Not Applicable	1, 2, 3, 4
2. Individual Report	10%	Not Applicable	1, 2, 3, 4
3. Weekly Quizzes	10%	Not Applicable	1, 2, 3, 4
4. Tutorial/Online Activity Participation	10%	Not Applicable	1, 2, 3, 4

Assessment 1: Major Report

This is a group activity (typically 5 students per group), consisting of a major report and group presentation.

This is not a Turnitin assignment

Assessment 2: Individual Report

The final exam for the report

Assessment 3: Weekly Quizzes

Weekly 10 minute quizzes given during the tutorial classes. There will be 8 such quizzes in total from weeks 3-10.

Assessment 4: Tutorial/Online Activity Participation

This will assess participation in the various tutorial and online activities throughout the course.

Attendance Requirements

Please note that lecture recordings are not available for this course. Students are strongly encouraged to attend all classes and contact the Course Authority to make alternative arrangements for classes missed.

Course Schedule

View class timetable

Timetable

Date	Type	Content
O-Week: 23 May - 27 May		
Week 1: 30 May - 3 June	Tutorial	Week 1: Welcome to BIOM1010, course introduction, team building, meet the mentors, intro to Fusion 360
Week 2: 6 June - 10 June	Tutorial	Week 2: Medical technology, information finding and resources, literature review, project selection and design & build
Week 3: 13 June - 17 June	Tutorial	Week 3: Clinical needs, brainstorming Ideas and reporting, referencing style, design & build project
Week 4: 20 June - 24 June	Tutorial	Week 4: Device assessment, data presentation and evaluation, group project proposal with feedback including peers evaluation
Week 5: 27 June - 1 July	Tutorial	Week 5: Ethics: just because we can..., introduction to medical device ethics, discussions on some medical scenarios, design and build project
Week 6: 4 July - 8 July	Group Work	Week 6: Flexible Week, no official teaching, Q&A sessions
Week 7: 11 July - 15 July	Tutorial	Week 7: Clinical trials: Trial stages of medical devices, report writing, design and build project
Week 8: 18 July - 22 July	Tutorial	Week 8: Regulatory requirements, practice on oral presentation, design and build project
Week 9: 25 July - 29 July	Tutorial	Week 9: Intellectual properties: IP strategy and patent search, class activity, design & build project
Week 10: 1 August - 5 August	Tutorial	Week 10: Health technology assessment, class activity, design and build project

Resources

Prescribed Resources

No specific textbooks are required for this course. Useful references will be listed on Moodle when required. Students seeking additional resources can also obtain assistance from the UNSW Library.

Recommended Resources

Medical Device Innovation Handbook by Durfee et al. Bakken Medical Devices Center, University of Minnesota, Minneapolis, USA

Course Evaluation and Development

Student feedback has helped to shape and develop this course, including feedback obtained from online evaluations as part of UNSW's myExperience process and UNSW Course Design Institute. Your feedback is much appreciated and taken very seriously. Continual improvements are made to the course based in part on such feedback and this helps us to improve the course for future students. Informal student feedback is also sought frequently throughout the semester and used to assist in the progression of the course.

Laboratory Workshop Information

Students will work with Makerspace to receive badges for 3D printing/laser cutting and digital fabrication. They also will work with CREATE UNSW team to provide the required components for their group project.

Submission of Assessment Tasks

Laboratory reports and major assignments will require a [Non Plagiarism Declaration Cover Sheet](#).

Assignments should be submitted on time. A daily penalty of 5% of the marks available for that assignment will apply for work received after the due date. Any assignment more than 5 days late will not be accepted. The only exemption will be when prior permission for late submission has been granted by the Course coordinator. Extensions will be granted only on medical or compassionate grounds under extreme circumstances.

Academic Honesty and Plagiarism

PLAGIARISM

Beware! An assignment that includes plagiarised material will receive a 0% Fail, and students who plagiarise may fail the course. Students who plagiarise will have their names entered on a plagiarism register and will be liable to disciplinary action, including exclusion from enrolment.

It is expected that all students must at all times submit their own work for assessment. Submitting the work or ideas of someone else without clearly acknowledging the source of borrowed material or ideas is plagiarism.

All assessments which you hand in must have a [Non Plagiarism Declaration Cover Sheet](#). This is for both individual and group work. Attach it to your assignment before submitting it to the Course Coordinator or at the School Office.

Plagiarism is the use of another person's work or ideas as if they were your own. When it is necessary or desirable to use other people's material you should adequately acknowledge whose words or ideas they are and where you found them (giving the complete reference details, including page number(s)). The Learning Centre provides further information on what constitutes Plagiarism at:
https://student.unsw.edu.au/plagiarism

Academic Information

COURSE EVALUATION AND DEVELOPMENT
Student feedback has helped to shape and develop this course, including feedback obtained from on-line evaluations as part of UNSW's as part of UNSW's myExperience process. You are highly encouraged to complete such an on-line evaluation toward the end of Term. Feedback and suggestions provided will be important in improving the course for future students.

DATES TO NOTE
Refer to MyUNSW for Important Dates, available at:
https://my.unsw.edu.au/student/resources/KeyDates.html

ACADEMIC ADVICE
For information about:

• Notes on assessments and plagiarism,
• Special Considerations,
• School Student Ethics Officer, and
• BESS

refer to the School website available at
http://www.engineering.unsw.edu.au/biomedical-engineering/

Supplementary Examinations:

Supplementary Examinations for Term 2 2022 will be held on (TBC) should you be required to sit one.

This course outline sets out description of classes at the date the Course Outline is published. The nature of classes may change during the Term after the Course Outline is published. Moodle should be consulted for the up to date class descriptions. If there is any inconsistency in the description of activities between the University timetable and the Course Outline (as updated in Moodle), the description in the Course Outline/Moodle applies.
