## Overview

- Some people with substance use disorders, particularly people who inject drugs and people with cocaine<sup>1</sup>, amphetamine<sup>2</sup>, or opioid dependence<sup>3</sup>, are at elevated risk of mortality. These elevated risks tend to be concentrated across a few key domains. Some of those are related to the manner in which drugs are taken (e.g. contraction of blood borne viral infections such as HIV through sharing of injection equipment); others may be related to the effects of drug and alcohol use (e.g. liver disease) and others still as relatively direct consequences of acute drug intoxication (e.g. accidental drug overdose).
- Classifying deaths into appropriate categories is not a straightforward task. Multiple iterations of the
  World Health Organization's (WHO) International Classification of Diseases exist, each of which defines
  deaths slightly differently. Some codes are not readily interpretable as belonging to a distinct
  grouping. Hundreds of codes exist, so the volume of categories may present challenges.
- This bulletin provides an overview of some key references that provide guidance on classifyingmajor causes of death that occur among people who use illicit drugs. It is intended to make categorization of deaths among illicit drug users an easier process, and perhaps one that is undertaken more consistently across studies.
- It provides groupings for both the International Classification of Diseases Version 9 (ICD-9) and Version 10 (ICD-10). The comparable codes in each are listed alongside each other. There may be differences in the deaths captured due to the version change, and this should be noted when analysing data across time.
- The source of each of these groupings is provided alongside each for ease of reference.
- Feedback on these groupings or suggestions for further groupings are welcomed.
- This is an update of a technical report from 2009<sup>4</sup>

Table 1: Definitions for major causes of death

| Cause of death category  | ICD-9  | ICD-10  | Sources   |
|--|--|---|---|
| All injury and poisoning (excl. alcohol-related)   | 304, 305.2-305.9,<br>E800-E869, E880-<br>E929, E950-E999                                     | F11-F16, F19, F55, V00-X99, Y00-<br>Y39, Y85-Y87, Y89   | CHO injury and poisoning indicator (Link)  - NB: F codes added to ICD-10 to include drug related deaths in circumstances of dependence (likewise 300 codes for ICD-9) and to encapsulate all deaths in subcategories below  - Does not include accidental or intentional poisoning by exposure to alcohol (X45, X65, Y15) |
| Drug-induced deaths Two definitions are provided. The first is a narrower definition and captures codes specifically related to drug use disorders and poisonings.   | 304, 305.2-305.9,<br>E850-E858, E950.0-<br>E950.5, E962.0,<br>E980.0-E980.5                  | F11- F16, F19, F55, X40- X44, X60-<br>X64, X85, Y10-Y14   | Santo, T., Clark, B., Hickman, M., Grebely, J., Campbell, G., Sordo, L., & Degenhardt, L. (2021). Association of opioid agonist treatment with all-cause mortality and specific causes of death among people with opioid dependence: a systematic review and meta-analysis. JAMA psychiatry <sup>5</sup>                  |
| The second definition <sup>1</sup> , is broader and captures drug-related diseases in addition to drug use disorders and poisonings. Note, there are several ICD-10 codes in this definition for which there is no corresponding ICD-9 code due to lack of mention of drug-induced. These include D, E, F18, G, I, J, L, and M. <sup>2</sup> | 292, 304, 305.2-<br>305.9, 790.99,<br>E850-E858, E950.0-<br>E950.5, E962.0,<br>E980.0-E980.5 | Underlying cause of death: F11.0-F11.5, F11.7-F11.9, F12.0-F12.5, F12.7-F12.9, F13.0-F13.5, F13.7-F13.9, F14.0-F14.5, F14.7-F14.9, F15.0-F15.5, F15.7-F15.9, F16.0-F16.5, F16.7-F16.9, F18.0-F18.5, F18.7-F18.9, F19.0-F19.5, F19.7-F19.9, D52.1, D59.0, D59.2, D61.1, D64.2, E06.4, E16.0, E23.1, E24.2, E27.3, E66.1, G21.1, G24.0, G25.1, G25.4, G25.6, G44.4, G62.0, G72.0, I95.2, J70.2-J70.4, L10.5, L27.0, L27.1, M10.2, M32.0, M80.4, M81.4, M83.5, M87.1, R78.1-R78.5, X40-X44, X60-X64, X85 Y10-Y14 | Chrzanowska, A., Man, N., Sutherland, R., Degenhardt, L. & Peacock, A. Table Notes: UCOD, underlying/primary cause of death; MCOD, multiple causes of death;

<sup>1</sup>No ICD-9 codes directly match ICD-10 undetermined and intentional opioid deaths. However, since ICD-9 has no contributing cause categories, all ICD-9 opioid-related deaths are technically undetermined, including 304.0\*, 304.7\*, and 305.5\*. Researchers may consider defining all ICD-9 non-accidental opioid-related deaths as undetermined (incl. intentional) but should be reported separately from deaths coded **using** ICD-10 in this category.

^ Prior to the 2013 reference year, the 2006 version of the ICD-10 was the most recent version used for coding deaths, with the exception of two updates after 2006. The first update was in 2007 related to the use of mental and behavioural disorders due to psychoactive substance use, acute intoxication (F10.0, F11.0....F19.0) as an underlying cause of death. If the acute intoxication initiated the train of morbid events, it is now assigned an external accidental poisoning code (X40-X49) corresponding to the type of drug used. For example, if the death had been due to alcohol intoxication, the underlying cause before the update was F10.0, and after the update the underlying cause is X45, with poisoning code T51.9.
