

HIA

# Gauging Demand and Supply Balance in the Australian Housing Market

Harley Dale

HIA Chief Economist

**UNSW Business School Real Estate Symposium**

Sydney, 8<sup>th</sup> September 2015

# The Backdrop for the Research

- It started on a plane ...
- There is considerable focus on the undersupply of housing in Australia;
- That term doesn't really mean much, but ...
- ... we've had a stab over the years ...
  - Housing Towards 2000 (1990)
  - Housing to 2020 (2009)
- We moved on to:-
  - Housing Australia's Future (2014)

# The Backdrop for the Research

- So the concept of undersupply (or oversupply) is hardly irrelevant, but ...
- ... it is overused.
- So, I started thinking about it a different way.

# Housing Imbalances 1

- Any cumulative housing oversupply (or undersupply) is dependent upon the point in time at which the 'count' begins.
- Households' consumption of housing services changes in response to market dynamics – there can never be a static oversupply, for example.
- Some might use Docklands in the early 2000's to dispute that.
- What starting point do we want to use?
- Let's say we get that right ...
- ... balance at an aggregate level wouldn't be the case in each state/territory, much less in each sub-market.

# Enter ... the HIA Housing to 2020

- We were the first forecaster to predict that new dwelling commencements would plumb close to 130,000 in 2009.
- Intuitively, that wasn't going to be good for meeting underlying housing requirements.
- We estimated a housing shortage of 109,200.
- “If current building trends were to persist, it is projected that Australia’s cumulated housing shortage would reach 466,000 dwellings by 2020”.
- Shortages were evident for NSW, Queensland, and WA ...

# Housing to 2020

## Top 20 housing shortages by LGA - Australia

Source: ABS, HIA Economics

# Housing Imbalances II

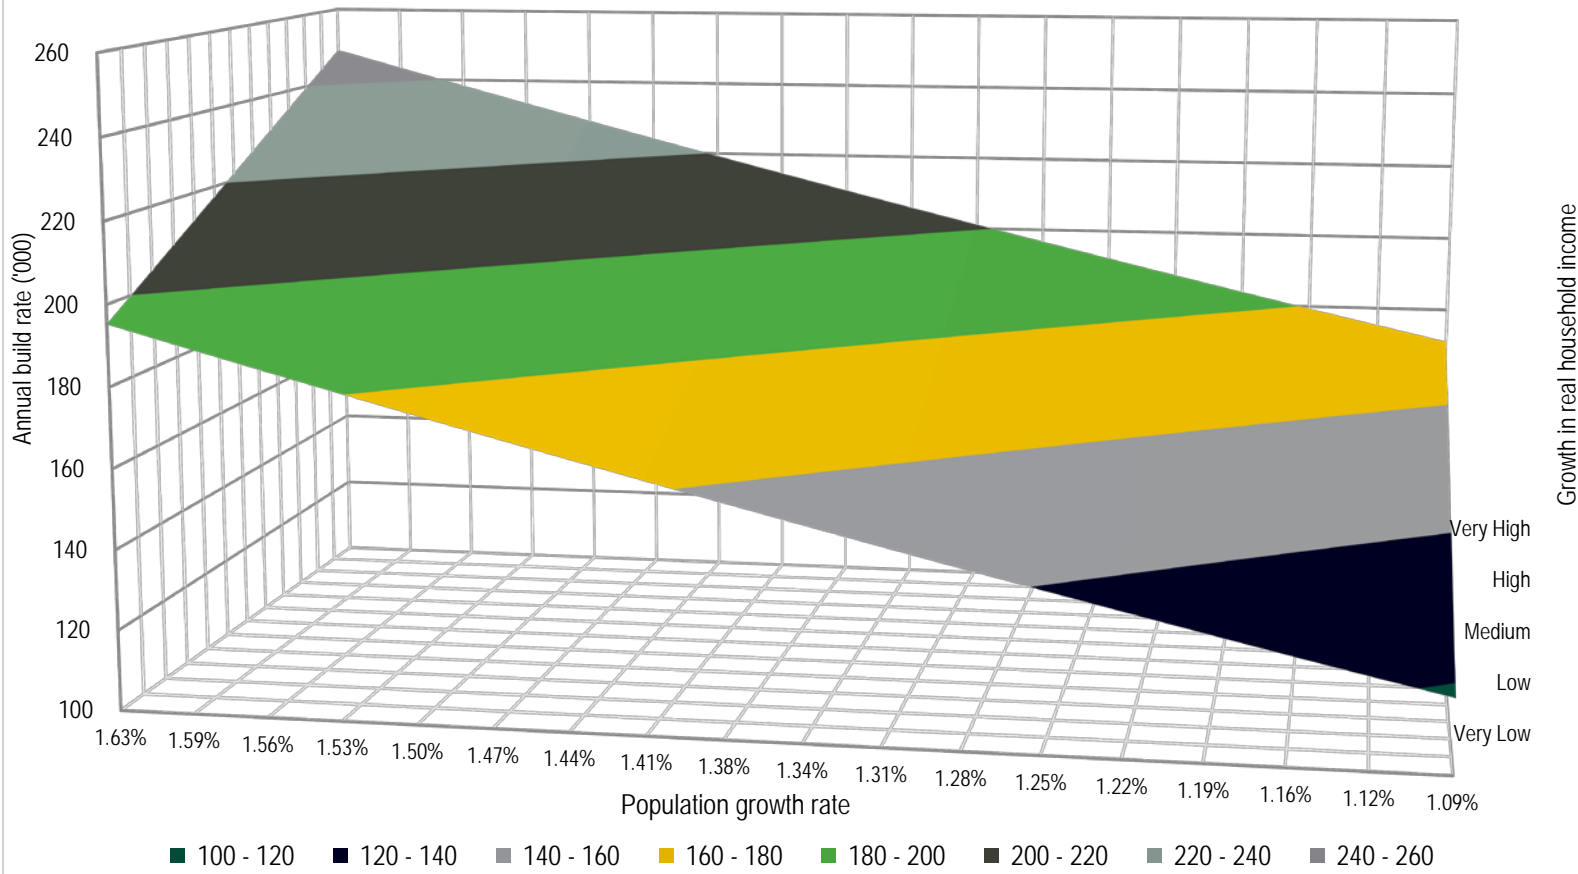

- Housing Australia's Future
- Demographic Analysis of Australia's Housing Requirements.
- Consideration of population growth and household formation + ...
- ... variations in economic conditions e.g. real household incomes.
- Presents a range of scenarios.

# 1. Future Demand for Residential Building

Future Demand for Residential Building - Australia

Source: HIA Economics

# 2. How does the ABS Stack Up?

\*Data relating to the 'ACTUAL' are estimates based on ABS's published figures for the first three quarters of the 2013/14 financial year and an estimate for the year's final quarter.

# 3. A Base Case to begin with ...

## AUSTRALIA

Population Growth Scenario			
	Series A	Series B	Series C
Population in 2012	22,721,995	22,721,995	22,721,995
Population in 2050	41,939,543	37,593,636	34,349,728
Implied annual population growth rate	1.6%	1.3%	1.1%
Additional dwellings required per annum	195,293	151,129	118,164
<b>Required annual build rate</b>			
Low real income growth	212,924	168,760	135,795
Medium real income growth	230,555	186,391	153,425
High real income growth	248,186	204,022	171,056

Source: HIA Economics & Australian Construction Insights

- Australia's current population growth rate is 1.4%.

# How do we look lately? Really good!

## Total Dwelling Starts – Australia

Source: ABS 8752

- HIA's forecast is for a peak of 214,450, with upside risk.
- The previous cyclical high was 187k in 1994!

# What does that mean?

- Over the last 10, 20 and 40 years Australia has averaged between 155,000 and 158,000 new dwellings per annum.
- There is a big change underway in the composition of what Australia builds, which is largely structural and ...
- ... if you want to be late for dinner I can talk about that the rest of the day ...
- Is 200k+ the new norm?
- It's a long way from the 150's ...
- What does Australia want to be the new norm?
- **Surely that's the conversation we need to have.**

# The Case of New South Wales

# Looking back to look forward

## Total Dwelling Starts – New South Wales

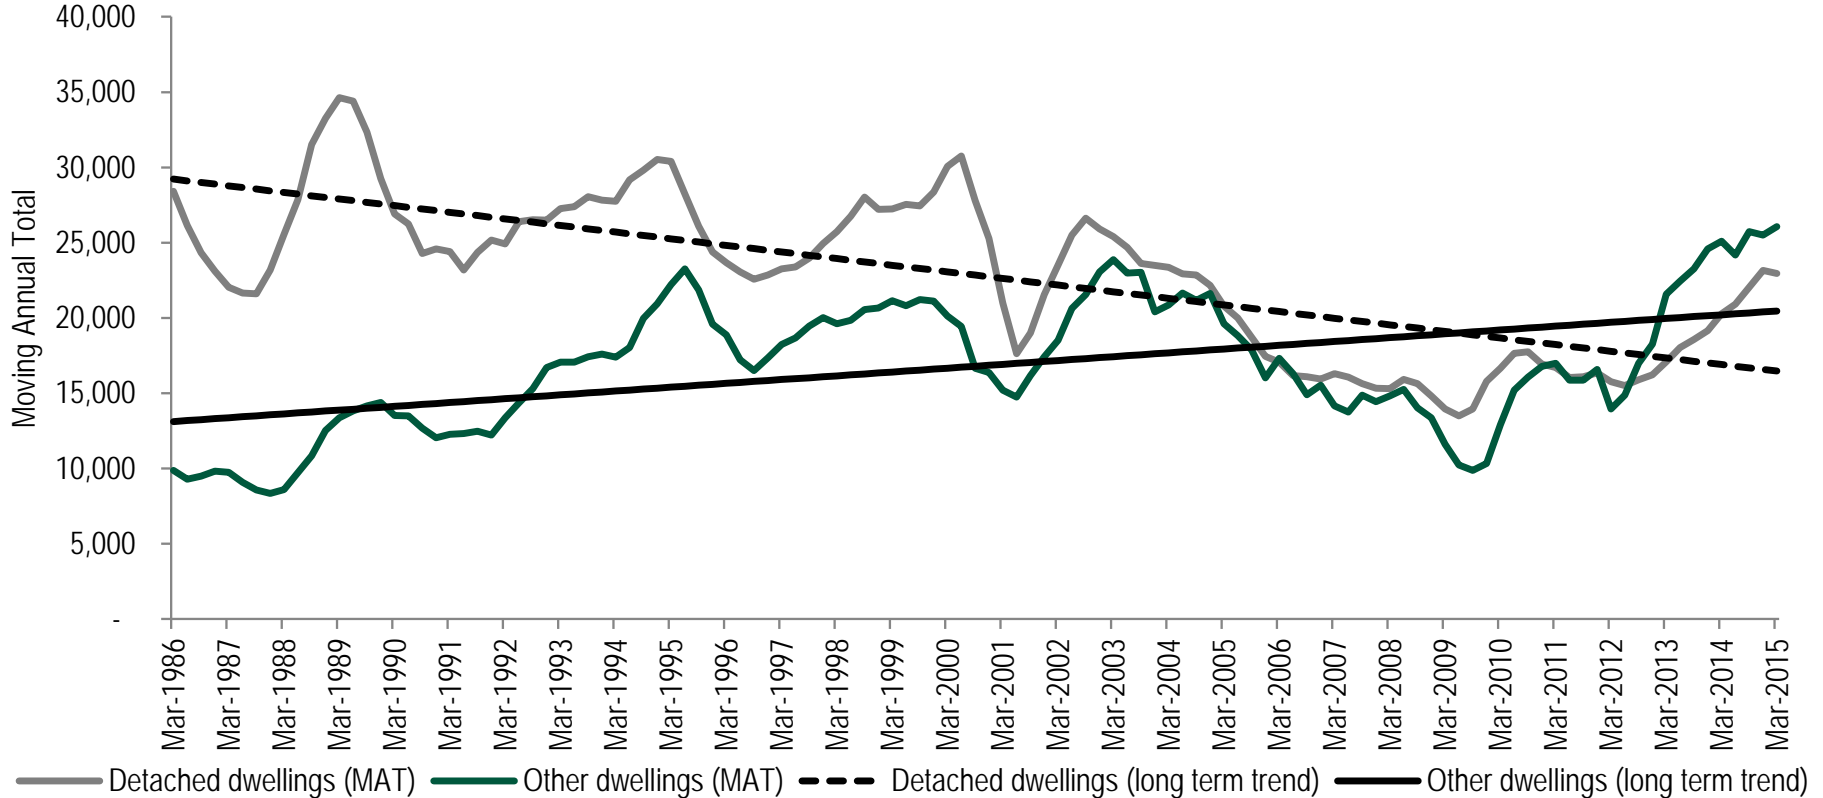

Source: ABS 8752

# The composition is changing and ...

## Dwelling Commencements and Long Term Trends - NSW

Source: HIA Economics, ABS

- ... that is a consideration.

# How do we currently 'look'?

## New South Wales

Population Growth Scenario			
	Series A	Series B	Series C
Population in 2012	7,301,134	7,301,134	7,301,134
Population in 2050	11,359,104	10,665,010	10,268,959
Implied annual population growth rate	1.2%	1.0%	0.9%
Additional dwellings required per annum	41,238	34,185	30,160
<b>Required annual build rate</b>			
Low real income growth	46,788	39,734	35,709
Medium real income growth	52,337	45,284	41,259
High real income growth	57,887	50,834	46,809

Source: HIA Economics & Australian Construction Insights

- Note the population growth rate scenarios in this base case.
- The current population growth rate is a (decelerating) 1.4%.
- Real income growth is relatively soft, so ...
- ... we're about right?

# In conclusion

- That was then, ... this is now.
- It is less about where we have been or where we are, although ...
- ... that is important.
- It is more about where we are going.
- If we don't narrow down where we want to go, then ...
- ... how do we know where we need to go?

# Australian Construction Insights

Australian Construction Insights (ACI) - powered by HIA Economics is the most reliable place to get market research and forecasts, in-depth analysis and expert presentations for the Building and Construction Industry. ACI is backed by Australia's most accurate forecasting record and a wealth of experience through our expert team of economists. ACI produces comprehensive and unique insights into the construction industry which can be tailored to your organisation's needs.

- Specialists in all components of Australia's construction industry
- Forecasting
- Market Research
- In Depth Analysis
